

## Course duration

- 3 days

## Course Benefits

- Understand the purpose and role of web services in general, and how they are architected to expose business systems and processes over the web
- Understand the concepts and principles of REST and HTTP applications
- Expanded knowledge of HTTP, including its full set of methods and their intended uses, important headers, response codes, and content types
- Understand REST APIs, including resource identifiers and the URI namespace, resources and subresources, and WADL
- Understand configuration, deployment, and the runtime environment, including per-request and singleton objects, options for dependency injection, etc.
- Understand how HTTP requests get dispatched to service methods
- Understand content negotiation and the importance of Accept and Content-Type headers, and how they impact method dispatching
- Bind request inputs to method parameters, including path parameters, query parameters, and headers
- Exchange business data by communicating in HTTP entities in both XML and JSON format
- Handle errors using Java exceptions and appropriate HTTP response codes
- Learn how to integrate JAX-RS services with other Java EE technologies like servlets, EJB, and CDI, and how JAX-RS fits into the larger Java EE landscape
- Write browser clients using Ajax-JavaScript
- Write Java clients using the JAX-RS 2.0 Client API, including standalone clients and server-side components invoking remote services
- Learn how to secure RESTful resources

### Available Delivery Methods

#### Public Class

Public expert-led online training from the convenience of your home, office or anywhere with an internet connection. Guaranteed to run .

#### Private Class

Private classes are delivered for groups at your offices or a location of your choice.

## Course Outline

1. Web Services Overview
  1. Definition
  2. Legacy Systems
  3. Benefits of Web Services
  4. Architecture
  5. Standards and Portability
  6. XML and Related Standards
  7. JSON
  8. HTTP
  9. SOAP-Based Services
  10. Overview
  11. SOAP Messages, Requests, and Responses
  12. WSDL
  13. Java APIs and Programming Models
2. Introduction to REST
  1. Overview and Principles
  2. REST Characteristics
  3. Resources and Operations
  4. REST Principles
  5. Requests and Responses
  6. REST APIs
  7. URI Templates
  8. GET, POST, PUT, DELETE
  9. Safe and Idempotent Methods
  10. Comparison of REST and SOAP
3. Introduction to JAX-RS
  1. APIs and Implementations
  2. JAX-RS Overview, Annotations
  3. JAX-RS Implementations
  4. Runtime Environment
  5. Application Server, Servlet-Only Container
  6. Architectural and Implementation Perspectives
  7. Configuring the Application
  8. Applications, Resources, and Providers
  9. JAX-RS Applications
  10. Resource Classes and @Path
  11. Provider Classes and @Provider
  12. Default Lifecycles
  13. The Application Class and rest-path
  14. Ajax-JavaScript Clients
  15. Overview
  16. Classic vs. Ajax Interactions
  17. Working with Ajax-JavaScript
4. Resources and Requests
  1. Resources and Subresources

2. Root Resource Classes, Resource Methods, Subresource Methods
3. @GET, @POST, @PUT, @DELETE
4. Subresource Locators
5. Naming Conventions and Rules
6. Dispatching Requests to Methods
7. Binding Request Data
8. Request Data Injection and Conversion
9. Default Values
10. Fields vs. Method Parameters
11. Context-Based Injection
12. Injection via @Context
13. Context-Injectable Types
14. Context Injection from the Web Container
15. Fields vs. Method Parameters
5. HTTP Entities
  1. Complex Content and Entities
  2. Working with Complex Content
  3. @Consumes and @Produces
  4. Content Negotiation
  5. Standard Entity Providers
  6. Working with JSON
  7. Returning Data as JSON
  8. Working with JSON in JavaScript
  9. Processing JSON Responses
  10. Working with XML
  11. JAXB and Mapping to XML
  12. Returning Data as XML
  13. Working with XML on the Client
  14. Customizing Content, Custom Media Types
  15. Working with Collections
  16. XML vs. JSON
6. Responses
  1. Response Class
  2. Return Types and HTTP Response Codes
  3. Appropriate Responses for HTTP Methods
  4. Choosing the Right Response
  5. Error Handling
  6. Exception Mappers
  7. WebApplicationException
  8. Response vs. Thrown Exception
  9. Error Responses
  10. Subresource Locators
  11. Motivation and Uses
  12. Locating the Locator
  13. Initializing the Subresource
  14. Binary Content
  15. File, InputStream, StreamingOutput

- 16. Using StreamingOutput
- 7. Java Client API
  - 1. Java Client - Options and Ingredients
  - 2. Building and Sending the Request
  - 3. Consuming the Response
  - 4. Options for the Response Data
  - 5. Asynchronous Requests
- 8. SIntegration with Java EE
  - 1. Integration with EJB
  - 2. CDI - Contexts and Dependency Injection
  - 3. Activation, Scopes, and JAX-RS Lifecycles
  - 4. Injection in CDI-Enabled JAX-RS Applications
  - 5. Enhanced Java EE Lifecycle
- 9. Security
  - 1. Java EE Security Overview
  - 2. Security Requirements in JAX-RS
  - 3. Declarative, Role-Based Security
  - 4. Security Constraints
  - 5. Annotation-Based Security
  - 6. Authentication
  - 7. Configuration
  - 8. Authentication Models: Basic, Digest, Client-Cert
  - 9. Programmatic Security
  - 10. SecurityContext
  - 11. Client Security
  - 12. HTTPS

## Class Materials

Each student will receive a comprehensive set of materials, including course notes and all the class examples.
